Selected Current Big Projects

Book project [with Cambridge University Press (English version) and Oxford University Press (Chinese version)]: *Institutional Genes: A Comparative Analysis of the Origins of China's Institutions*.

This project studies the institutional origins of contemporary China's institutions from the angles of political economics and new institutional economics. It intends to make two contributions: 1) shed new lights on understanding China's institutions, socio-economy, and politics in the past and today, and their perspectives in the future; 2) establish a general analytical framework, which opens up the black box of path-dependent theory (North) in analyzing institutional changes. The new analytical framework "institutional genes" is based on or inspired by mechanism design theory.

Analysing China Corporate Litigations by AI-Natural Language Processing (NLP) Approach. This is a joint project with Prof Xiaodong He, the AI head of JD.com. using more than 60 million official dispatch of court cases.

China AI Index. This project is a collective data collection and metrics construction efforts for comparing China with developed nations in AI research and applications. The efforts are coordinated with the Stanford HAI-AI Index Project.
